

OVERVIEW

Eco-Grip® safety flooring is a 1/4 inch thick, flexible, slip resistant flooring product that features a textured wear surface and is manufactured completely from recycled materials. From reducing slips and falls to eliminating bacterial growth, Eco-Grip® meets or exceeds both ADA and OSHA requirements for safety floors and ramps.

Eco-Grip® is the primary component of Allied Industries safety flooring system. Combined with state-of-the-art products such as maximum strength 2-part epoxy adhesive, high quality marine adhesives and sealants, mechanically fastened clamping drain detail, heavy-duty stainless steel thresholds and termination strips, and custom contoured impact-resistant base cap, the complete system is by far the best safety flooring application for food service kitchens, coolers, freezers, bars and service areas.

Eco-Grip® safety flooring is completely non-corrosive and non-absorbent. Manufactured from 100% post-industrial recycled PVC material, Eco-Grip® combines cohesive fibers and a micro-biocide to create flooring that is virtually indestructible. Eco-Grip® safety flooring is impact and puncture resistant, grease and chemical resistant, and repels weather, odors and stains, ensuring a great look for years to come. Eco-Grip® is also resistant to animal fats, cooking oils, and harsh cleaning chemicals, and is designed to remain flexible and slip resistant even in areas where these are present. Eco-Grip® features patent-pending chemistry, and will not shrink, separate, or become hard in service as other vinyl floors can—even after many years!

Eco-Grip® also prohibits the growth of harmful bacteria. The micro-biocide extruded into the flooring sheet eliminates the presence and production of bacteria. Tile floors require grout, where bacteria can grow. Eco-Grip® flooring is a solid, heat welded membrane which covers your entire service area. There is no need for grout, bacteria have nowhere to hide!

Eco-Grip® slip resistant safety flooring is warranted against manufacturing defects by Allied Industries International for 5 years. We recommend the use of the Eco-Grip® Commercial Kitchen Floor Cleaning System for all flooring installations.

And it's so easy to clean! Simply apply Eco-Grip® Commercial Kitchen Floor Cleaner with our proprietary foam gun dispensing tool, allow 6-8 minutes for the chemical to work, deck brush, and rinse with fresh water. You can mop the cleaner on as well, allow 8–10 min. dwell time, deck brush and rinse with fresh water.
